Caching has been achieved in this project through the use of Node.js Express's ability to serve static content. All static resources – such as images, scripts, and style sheets – are flagged to be cached by the user's browser.

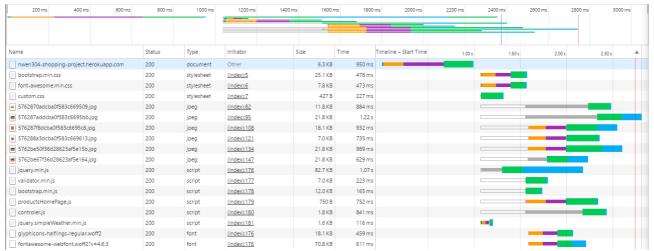

Illustration 1: The first page load, which takes over 3000 ms with no assets in the browser cache. Note the long download times for static resources.

10000 ms 20000 ms 30000 ms	40000 ms 50	0000 ms 6000	0 ms 70000 ms	80000 ms 9000	0 ms 100000	ms 110000 ms	120000 ms 130000 ms	140000 ms	150000 ms	160000 ms	170000 ms

fontawesome-webfont.woff2?v=4.6.3	200	font	jquery.min.js:3	(from cache)	3 ms						

Illustration 2: A subsequent page load, where static resources are cached in the browser. This page load took 1100 ms.

In addition to asset caching, the entire primary index page can also be cached for two minutes in a user's browser. On a site that generates a lot of traffic from users that are not logged in, this would significantly reduce server load as the application would not need to render pages with every requests. Note, however, that for security and privacy reasons pages are not cached if a user is logged in.

fontawesome-webfont.woff2?v=4.6.3	200	font	jquery.min.js:3	(from cache)	3 ms						

Illustration 3: A subsequent page load, where in addition to using cached assets, the browser can also use a cached page. This page load took 140 ms - and it is even faster without dev tools open!

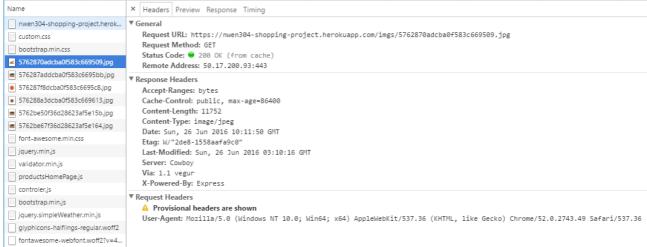

Illustration 4: Example HTTP cache headers that are in use for one of the site's assets (in this case, an image).
